OUR AIM AND VISION

The firm pursues innovation in every aspect of work devising methods that responds to each client's unique and changing needs. We understand budget as a design challenge. The endeavor to convey both the philosophy and the creative energy that go into evolving a space is our firm's mainstay.
Be it public space like multiplex, retail outlet or mall places we rely on the modern infrastructure & support systems comprising of computer aided designs and dedicated team of qualified architects and interior designers to create comprehensive and integrated solutions for unique designs making luxury and practicality live under the same roof.
While developing the project, our aim is to provide you design concept, complete detailed working drawings based on the concept drawings resolving the working details of furniture, lighting and other fixtures & make them functional, comfortable, easy to maintain and yet cost effective. It will be blending of aesthetics with elegance and functionality with flexibility.

OUR TEAM

Mr. Prakash Gore
Partner

The partner of the firm Mr. Prakash Gore completed B. Arch. course from L.S. Raheja School of Architecture, in 1991.
Ar. PRAKASH GORE leads PGAG ARCHITECTS in creating stand-out structures combining elements of aesthetics and efficient functionality. Under his guidance, the firm has transformed many value propositions into great experiences from commercial and high end residential interiors to large scale architectural projects.
His work is a constant pursuit of a visionary aesthetic that encompasses all fields of design. He believes that once the trust of a client and the concept plan is resolved everything else, falls in place. Despite his notable accomplishments he is driven to constantly reinvent his work. His central concerns involve a simultaneous engagement in practice and research.
His creative, out of the box thinking while creating concepts be it any project multiplex, healthcare, commercial interior projects is key to his success.

Ms. Amita Gore
Partner

The partner of the firm Mrs. Amita Gore completed B. Arch. Course from, J.J. Collage of Architecture in 1995.
She aims at transforming every site into a stimulating environment, rich in inventive detailing. Her dynamic nature and sparkling persona reflects in her work, leaving an everlasting impression on the minds of spectators. She has also been picked up by Architect and Interiors India as one of the leading architects of the country.
Her strong skills are feasibility study of the space, preparing feasibility drawings and reports. She has nurtured her skills in co-ordination of architectural and interior drawings with structural drawings, all MEP services drawings. She is spent number of years in the industry and has mastered skills in monitoring, reviewing and approval of shop drawings for construction.Preparation of construction document, BOQ, cost estimate remains her strong forte.

Mr Anooj Vakil

The firm has completed many retail projects in design and build format for international cosmetic brands like L'Oréal, Chambor, Bourjois, Pupa, Elizabeth Arden etc.
We have completed more than 25 Kaya Clinic projects for Kaya Limited India and 5 standalone store projects for Faces Canada.

Design Process and Methodology
- for Healthcare projects

We follow multi-disciplinary approach while designing healthcare projects to ensure holistic and scientific planning and designing

- Our designers are sensitive to the effects of the physical environment on the patient, staff and the public. The quality and character of the environment has subtle yet profound influences on the users and occupants of a facility. We believe that the physical environment can be an integral component of therapy in the process of healing. Besides functional efficiency, well designed spaces, natural light, use of appropriate colours and art work based on nature themes are believed to enhance the healing experience and contribute towards better & relatively quicker positive outcomes
- We implement the go green concept which incorporates environment protection, water conservation, energy efficiency, usage of recycled products and use of renewable energy.
- We believe that a well-designed facility optimizes on initial capital investment, long term running costs, staffing requirements and energy consumption.
- Good design enables positive clinical outcomes and enhances patient, staff and family satisfaction.
- We try to make maximum usage of primeval forces of energy like light sun water and air.
- Our design ensures to be efficient when most needed such as in disasters and earthquake situations.
- Our design solution provides seamless integration of clinical requirements with building planning and designing issues. There is a harmonious convergence of the clinical administrative and hospitality dimensions in our healthcare design solution.
- Our design blends functions and aesthetics.
- We build healthcare infrastructure which full fill requirements of today as well as future. We put into practice the golden architectural principles of indeterminacy and enables a building to grow with order and change with calm.
- For retrofit projects we follow a process of detailed study of the brief given by client and check the feasibility of the project by checking all parameters like total square feet area, clear height, column grid,lift sizes, common space width required for the movement stretchers,ramps for disables, MEP provisions so that Client's requirements get fulfilled.We guide client to make necessary changes in design programme and developer to make necessary changes in the structure if possible so that the projects get delivered in efficient manner.
- The planning and designing is realistic and achievable within the time frame and available resources.
- The healthcare building we design will respond to local climate and vernacular architectural characteristics of the region. We make use of local skills, materials and natural resources. Our Planning tries to incorporate flexibility and expandability. We optimally utilise modular approaches and universal usage.
- Our efforts are to provide best facilities for preparation of life, protection of life and quality of life.
- Our design ensures easy and cost effective maintenance.
